Proactive IT
vs. Reactive IT

The Ultimate Business Decision

IT issues can break your business or prove to be just a minor hiccup—it all depends on your approach. **Proactive IT prevents** problems before they escalate. **Reactive IT waits** until it's too late.

Which side are you on?

Prevent
or **Repair?**

Proactive IT

Finds and fixes problems early.

Reactive IT

Waits for breakdowns to happen.

Security First
## or **Risk Exposure?**

Proactive IT

Reduces cyber risks through regular updates and audits.

Reactive IT

Fixes security gaps only after a breach.

Smart Investment
or **Costly Surprises?**

Proactive IT

Cuts downtime and prevents expensive failures.

Reactive IT

Leads to unpredictable repair costs sending you over budget.

Long-term Strategy
or **Short-term Fix?**

Proactive IT

Aligns IT with business growth.

Reactive IT

Focuses on patching immediate issues.

A **proactive IT** strategy keeps your business ahead, **secure, efficient and prepared.**
